

Electric Power Substation SCADA Application

FESTO

Starting and closing the application

Introduction

The following procedure provides step-by-step instructions to start the Electric Power Substation SCADA Application as well as instructions to close the application. The Electric Power Substation SCADA Application allows control and supervision of an electric power substation implemented using modules Circuit Breakers and Disconnecting Switches 1 and 2, Models 3783-0 and 3783-A, respectively. You must install and configure the Electric Power Substation SCADA Application as instructed in the accompanying installation procedure before attempting to use it.
