## **General Description**

The Push-Button Switch – Black is a two-circuit switching device. It has double-break contacts connected to a plunger, which, when depressed, break a normally closed circuit and make a normally open circuit. When the push button is released, a spring returns the contacts to their normal position.

Reflecting the commitment of Festo Didactic to high quality standards in product, design, development, production, installation, and service, our manufacturing and distribution facility has received the ISO 9001 certification.

Festo Didactic reserves the right to make product improvements at any time and without notice and is not responsible for typographical errors.
