General Description

The Cam Switch (Drum Type) is a manually operated heavy duty rotary switch that may be used for direct motor control. It has five independent double-break sets of contacts operated by cams attached to the switch shaft. The switching sequence is the action of sets of contacts being operated in a specific order with regard to other sets of contacts in the same switch. Since the cams are preset, a table of contact operation must be provided. The chart shows the state of each set of contacts for each of the switch index positions for this particular switch.

Reflecting the commitment of Festo Didactic to high quality standards in product, design, development, production, installation, and service, our manufacturing and distribution facility has received the ISO 9001 certification.
