General Description

The Electro-Pneumatic Module and the associated equipment enable stamping, hold-and-punch, and filling operations. The module features two pneumatic cylinders arranged so as to distribute a programmed number of marbles from two tubes (feed lines) into a container. A second configuration allows students to perform a clamp-and-work operation on a plane material, such a sheet of paper. Two reed switches and one limit switch are installed to provide feedback on the cylinders' positions.
