## General Description

The Muffler Assembly is composed of two air inlet ports connected to a muffler to reduce exhaust noise. A graduated hand valve for each air inlet restricts the access to the muffler while a third one is used to link the two input lines.

Reflecting the commitment of Festo Didactic to high quality standards in product, design, development, production, installation, and service, our manufacturing and distribution facility has received the ISO 9001 certification.

Festo Didactic reserves the right to make product improvements at any time and without notice and is not responsible for typographical errors.
