

A Special Process Control Training System for Rockwell Automation

Industrial customers often have specific demands for training or research equipment. Rockwell Automation needed to effectively demonstrate its PlantPAx® process automation system on the event floor to prospective customers and event attendees. So they turned to Lab-Volt for a unique solution.

Working closely with Rockwell Automation to meet its requirements, Lab-Volt's team modified a standard [Instrumentation and Process Control training system](#) – Model 3531 – to turn it into a custom demonstration unit. This new modular unit is capable of showing real-life process applications across a wide range of industries, including water and wastewater, oil refining, petrochemical, and food processing.

Rockwell Automation has already seen success with the new demonstration unit. Read [an account of their experience](#).
