

New Colors for Lab-Volt's Training Systems

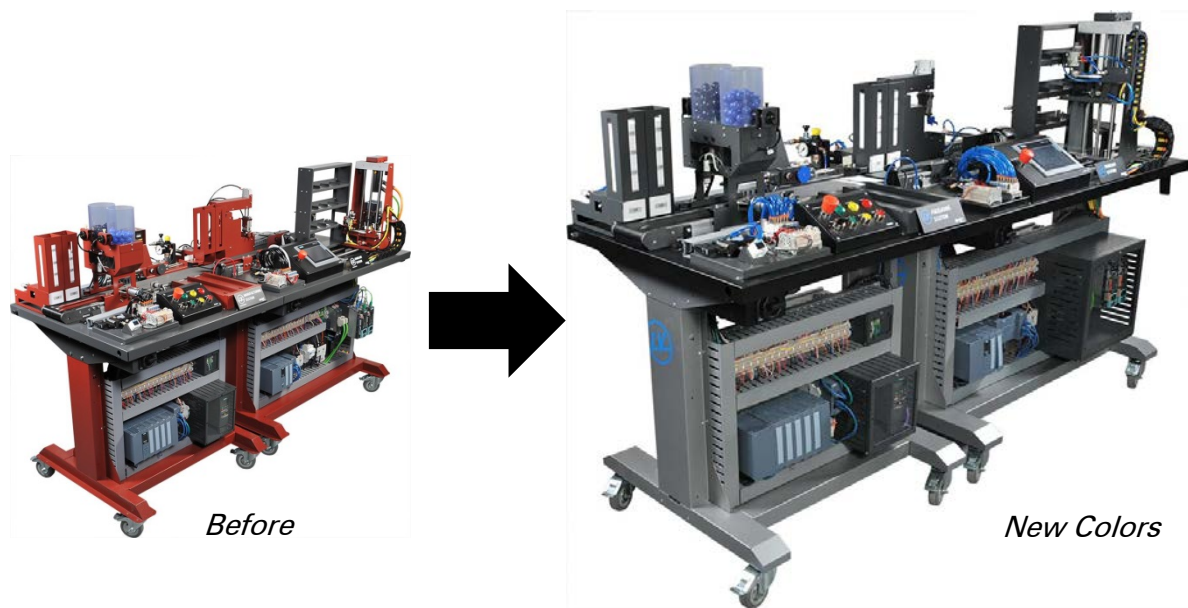

Spring has arrived, and so has the need for changes!

Our team felt it was time to infuse a contemporary touch to our equipment. Red is a nice color, but it is no longer part of our corporate palette.

This is why we decided to gradually change the colors of new and upcoming models. A combination of gray, black, and blue gives a sleek contemporary look. The appearance of the training systems is more neutral, yet trendy and professional.

We think it will fit nicely in school and industry laboratories, while being visually more appealing to the students.

We began implementing the color change by repainting our Advanced Mechatronics System. See the difference for yourself – we hope you will like it!
