General Description

The Solenoid Valve (Air) is a four-way, two-position, single-solenoid operated, directional control valve. It is made of brass and has 1/4 inch connectors. The valve can be used, among other things, to direct the flow of air and to create perturbations in the system. A 24 V dc signal is used to toggle the position of the solenoid.

Reflecting the commitment of Festo Didactic to high quality standards in product, design, development, production, installation, and service, our manufacturing and distribution facility has received the ISO 9001 certification.

Festo Didactic reserves the right to make product improvements at any time and without notice and is not responsible for typographical errors.
