

Custom Demo Cases for Siemens Canada

Siemens is one of our long-time partners; as a matter of fact, several of Lab-Volt's training systems integrate Siemens components. Siemens Canada has recently expressed the need for special suitcases that can easily showcase their Programmable Logic Controllers (PLCs) and Human Machine Interfaces (HMI) – among other products – during shows and exhibitions, as well as training sessions.

Knowing that Lab-Volt often works on customization projects upon request, Siemens turned to our engineering team to design custom demo cases, allowing us to once again leverage our expertise for the benefit of our customers. Since Lab-Volt already offers training systems in suitcases, it was easy to design new portable systems integrating the requested Siemens products.

The customized systems are enclosed in rugged suitcases for easy transportation and storage. Each suitcase presents a complete yet flexible system that Siemens representatives can use for training purposes or to show potential customers the power of their solutions.

Below are a few pictures of the custom cases currently featured at the Mini Fair during Siemens Canada Innovation Tour 2014.
