

Release date: 2013-07-08

Brief description of the problem:

Display problems may occur with high resolution screen and font size above 96 pixels per inch (100%).

Full description of the problem:

When a small high resolution screen is used with Windows font size set to a different value than 96 DPI, LVDAC-EMS may have a poor interface layout like rotary knobs and button overlapping and meters missing part.

Affected software: LVDAC-EMS

How to fix on Windows XP:

Go to Control Panel and click on Display, then click on Appearance tab and select Normal font size. Apply changes.

How to fix on Windows 7:

Go to Control Panel and select View by: Large icons, then click on Display. Change the text size to Smaller – 100%. Apply changes.
